

May 3, 2023

Dear Shareholder:

As most of you are aware the infrastructure project replacing many of the main water lines in the area will begin this summer and you will start to see crews working in the neighborhood. In order to cover the loan payments to the State of Utah we will be adopting the water rate schedule below:

	Lower Limit	Upper Limit	Cost/1000
Base Rate	0	20,000	\$140.00
Tier 1	20,000	25,000	\$15.00
Tier 2	25,000	30,000	\$20.00
Tier 3	30,000	35,000	\$25.00
Tier 4	35,000	40,000	\$30.00
Tier 5	40,000	9,999,999	\$35.00

This schedule allows for 20,000 gallons at the base rate of \$140 with an incremental schedule above 20,000. The first month to be billed on the new schedule will be May 2023.

The extraordinary winter snowpack is a good thing after years of low snowpack, but we still should use water wisely, especially as we head into the water greedy summer months. We ask that you **delay watering as long as possible. PLEASE MONITOR** your water usage carefully. Please be aware that even a small leak can waste a tremendous amount of water. Closely monitor your toilets, fixtures, water softeners and appliances for leaks. Timely repairs can save you a lot of money in overage fees while preventing significant water resources being wasted. Reset your sprinklers frequently as power surges, seasonal weather conditions and plant size should be accounted for. For the summer of 2023 the watering schedule is as follows:

All addresses on :

Highland Drive Silver Sage Drive Countryside Circle WEDNESDAY FRIDAY SUNDAY

Fairview Mountainview Starview Snowview Drives TUESDAY THURSDAY SATURDAY

There should be no watering on Monday. Please **do not** water between 9AM and 7PM. If you begin watering early in the spring, your lawn will not send its roots down. Shallow roots, typically caused by

overwatering, produce unhealthy grass. The deeper the roots the more healthy the grass and the easier it is to maintain. Later, if you adjust your mower height to at least 2.5 to 4 inches this will encourage deeper roots and shade the soil. Or, consider xeriscape as an alternative to water thirsty grass.

We would like to remind shareholders that there is a variety of information on our website (highvalleywater.com) such as using pesticides properly and managing your septic system correctly.

Please do your part to help preserve and protect your water supply ! Use water wisely !
